The mission of Cape Fear Community College’s IT Services division is to promote student learning by providing a total source, single-point resource for the information system support at CFCC.

IT Services supports the college administrative and instructional computing systems, the network infrastructure, the desktop computers used by faculty, staff, and students and the college telephone systems.

These functions are carried out by IT Services personnel whose collective job descriptions entail: computer hardware, software, web creation and support, system administration, helpdesk, computing system and network security and telephony. The Director of IT Services supervises this staff and manages the budget for the department.
