Hi. This is Bob Rajsky, EMS education coordinator at Cape Fear Community College. We have an exciting opportunity for EMS folks coming up in March. Have you ever wanted to do your own research, to be involved with a project that makes a difference down the road long-term in EMS? Well, we have that opportunity coming up.

Cape Fear, in conjunction with UCLA's Pre-Hospital Care Research Forum and Ogden New Hanover Rescue Squad are offering a two-day EMS research course. It's going to be right here at Cape Fear Community College. The course is on March 23 and 24, two days. This course goes over all of the things that you need to understand research, how to evaluate data, how to acquire good data.

You'll also learn how to do your own research. And at the end of the program, you will leave with an abstract that's ready for a review by publications in the EMS world. Joining us will be world-renowned EMS researcher, educator, author, and EMS provider David Page.

David is the director of UCLA's Pre-Hospital Research Form, and he is going to be here to share his knowledge and wealth of expertise to the next generation of EMS researchers. We'll also have three other national researchers on site for you to use during the class, the entire class. So we have four world-class EMS researchers at your disposal to use how you need to to get your abstract completed.

Just a few short years ago, this kind of program was by invitation only. Only a few folks got to do this on a yearly basis. Now, we're bringing it right here to our backyards, right in Wilmington, North Carolina. And thanks certainly to the hard work and dedication of Cape Fear Community College and Ogden New Hanover Rescue Squad, we're going to have an outstanding program right here.

For more information on this program, you can please email me at rrajsky@cfcc.edu. And you can always call me. My number is 910-362-7751. Or if I'm not there 910-362-7770.

I want to thank you for your time. I look forward to seeing you March 23 and 24 for this EMS research course. Thank you very much, and please be safe out there.
